FERTILIZATION GUIDE

OLIVE FARMING

Organically managed agricultural land surface is widely increasing all over the world and organic olive farming in suitable environments as well. Both olive oil and pickled olive fruits demand is rising and organic products register an increasing tendency, mainly in the northern European and American markets. Scientific literature reports several studies about organic olive farming, but a comprehensive summary is lacking. Economic social implication represents a pivotal aspect in the passage from conventional to organic farming in olive and the price perception of organic productions in the market is a strong physiological threshold. Soil fertility maintenance through minimal soil disturbance, permanent soil cover and organic matter application helps to prevent soil erosion, increase organic matter availability and biodiversity reducing external input supply with higher autonomy for the ecosystem.

A good organic matter cycle management allows a more efficient use of minimal amounts of organic fertilizers and an improved possibility to integrate plant nutrition with fertigation or foliar applications so that to reduce the leaching and the environmental pollution. As well, the use of olive oil by-products as amendment and source of nutrients has been studied and is advisable. The study and the selection of more resistant cultivars improve the effectiveness of the organic approach for pest and disease management in the vision of an integrated approach of the whole factors involved in the production process.

FOR OLIVE

BASE FERTILIZATION PROGRAM

Spring Base Fertilization

Pulcu Leo Bio	0.5 - 2 Kg / tree	
Pulcu Excellent 20-10-10+10S	0.5 - 2 Kg / tree	
Drip Irrigation		
April	/ decare	
2P AminoMax 45	100 сс	
Nano Elite 30-10-10+Te	2-5 kg	
Мау	/ decare	
Pulcu Expert 10-52-10+Te	2-5 kg	
2P Zinc EDTA 15%	400 gr	
June	/ decare	
Pulcu Expert 20-20-20+Te	2-5 kg	
2P BorMax	300 cc	
July	/ decare	
2P AminoMax 45	100 cc	
Nano Elite 20-10-20+2,5MgO+Te	2-5 kg	
August	/ decare	
Pulcu Expert 16-8-24+Te	2-5 kg	
September	/ decare	
Nano Elite 15-5-40+Te	2-5 kg	
Nano Elite 15-5-40+1e	2-5 Kg	

FOR OLIVE

FOLIAR FERTILIZATION PROGRAM

Before Blooming	manual spray	spray by turbo		
2P Nano Root	2.5 lt	3.5 lt		
Pulcu Expert 10-52-10+Te	2.5 kg	3.5 kg		
2P Zinc EDTA 15%	1 kg	1.5 kg		
At Blooming	manual spray	spray by turbo		
2P Nano Root	2.5 lt	3.5 lt		
2P Cytokin	600 cc	800 cc		
After Blooming	manual spray	spray by turbo		
Pulcu Expert 20-20-20+Te	2.5 kg	3.5 kg		
2P Gold Combi	1 kg	1.5 kg		
2P BorMax	1 lt	1.5 lt		
Fruit Development Period	manual spray	spray by turbo		
2P Nano Root	2.5 lt	3.5 lt		
Nano Elite 17-7-21+6,5CaO+2,5MgO+TE	2.5 kg	3.5 kg		
It should be applied repeatedly after 20 days. It	It should be applied repeatedly after 20 days. It can be mixed with pesticides.			
2P BorMax	1 lt	1.5 lt		
Nano Elite 15-5-40+Te	2.5 kg	3.5 kg		
For Fruit Color and Quality	manual spray	spray by turbo		
2P Nano Tek	2.5 lt	3.5 lt
