

FERTILIZATION GUIDE FOR STRAWBERRY

FERTILIZATION GUIDE FOR STRAWBERRY

STRAWBERRY FERTILIZATION

Strawberries are resilient and can grow in many different settings. Knowing when and how to fertilize strawberry plants will ensure a bountiful harvest but, along with strawberry plant feeding, there are a few other tasks to do to ensure healthy plants that will provide the biggest yields.

Once you have the berries situated, it is important to water them regularly. Strawberries dislike wet soil, but they also don't tolerate drought well, so be consistent in your watering. Keep the area around the berry plants free of weeds and keep an eye out for any signs of disease or pests. A layer of mulch, like straw, underneath the leaves of the plants will prevent water splashing onto the soil and then onto the foliage from passing on soil pathogens. Remove any dead or decaying foliage as well, as soon as you spot it.

Strawberry plants need a lot of nitrogen in early spring and again in late fall as they are sending out runners and producing berries. Ideally, you have prepared the soil before planting the berries by amending with compost or manure. This will enable you to lessen or eliminate the amount of additional fertilizer the plants need. Otherwise, fertilizer for strawberries may be a commercial 10-10-10 food or, if you are growing organically, any of a number of organic fertilizers.

FERTILIZATION GUIDE FOR STRAWBERRY

STRAWBERRY FERTILIZATION PROGRAM

Base Fertilization
Before Planting Seedlings (On Planting Sets)

Pulcu Leo Bio	40-50 kg / decare
Pulcu Excellent 14-12-14+13S	40-50 kg / decare

Drip Irrigation

Just After Planting	Per Acre
2P BioHumic 25	1 lt
2P AminoMax 45	100 cc
Pulcu Expert 20-20-20+Te	350 gr / day
2P Nano Root	1 lt
Pulcu Expert 20-20-20+Te	350 gr / day
2P Gold Combi	200 gr
Pulcu Expert 10-52-10+Te	350 gr / day
2P Cal-L	2 lt
Pulcu Expert 20-20-20+Te	350 gr / day
2P AminoMax 45	100 cc
Nano Elite 20-10-20+2,5MgO+Te	400 gr / day
Pulcu Expert 16-8-24+Te	400 gr / day

FERTILIZATION GUIDE FOR STRAWBERRY

STRAWBERRY FERTILIZATION PROGRAM

Drip Irrigation
After the Rest (Sleep) Period

If Vegetative Part (Green Part) Is Weak	Per Acre
2P Nano Root	2 lt
2P AminoMax 45 (Repeat every 4 weeks)	100 cc
Pulcu Expert 20-20-20+Te	400 gr / day
2P Gold Combi	200 gr
For Blooming	Per Acre
2P BioHumic 25	1 lt
Pulcu Expert 10-52-10+Te	400 gr / day
2P Zinc Edta 15%	250 gr
During Development	Per Acre
Pulcu Expert 20-20-20+Te	500 gr / day
2P Cal-L	2 lt
2P BorMax	300 cc
Fruit Development Period (1)	Per Acre
Nano Elite 20-10-20+2,5MgO+Te	500 gr / day
2P AminoMax 45	100 cc
2P Nano Root	2 lt
Fruit Development Period (2)	Per Acre
2P Cal-L	2 lt
Pulcu Expert 16-8-24+Te	500 gr / day

FERTILIZATION GUIDE FOR STRAWBERRY

STRAWBERRY FERTILIZATION PROGRAM

Drip Irrigation
After the Rest (Sleep) Period

Harvest period

2P Nano Tek

Per Acre

2 lt

Nano Elite 15-5-40+Te

500 gr / day

If the above applications are applied regularly, important results are obtained in efficiency.

FERTILIZATION GUIDE FOR STRAWBERRY

STRAWBERRY FOLIAR FERTILIZATION PROGRAM

Drip Irrigation
After the Rest (Sleep) Period

To stimulate flower formation	100 lt water
2P Nano Root	250 cc
2P ZINC EDTA %15	80 gr
Nano Elite 11-40-10+2,5MgO+TE	250 gr
If the Vegetative Part (Green Part) is Weak	100 lt water
2P BioHumic 25	50 cc
2P GOLD COMBI	60 gr
Nano Elite 30-10-10+TE	250 gr
To Improve Fruit	100 lt water
Pulcu Expert 18-18-18+TE	250 gr
2P COMBI MAX	80 cc
Against Fruit Softening	100 lt water
2P Cal-L	250 cc
2P BOR MAX	100 cc
To Improve Color And Fruit	100 lt water
Pulcu Expert 7-6-40+TE	250 gr
2P CYTOKIN	60 cc
For Color and Quality	100 lt water
2P NANO TEK	250 cc

- Especially when spraying and foliar fertilizer applications, adding 50 cc 2P WET per 100 lt / 50 cc will increase the effectiveness of both spraying and foliar fertilizers.
